BLÄTTLER HOLZBAU

Switzerland

Blättler Holzbau

Blättler Holzbau GmbH combines traditional craftsmanship with modern technology and high standards of architecture and design.

Since its founding in 1961, the family-owned business has evolved from a traditional timber construction firm into a company with comprehensive expertise in all aspects of modern timber construction. Accordingly, its own office and administrative building was to be designed to be open, bright, and architecturally clear—characterized by the material wood and reflecting a modern, forward-looking company. TRILUX Switzerland was brought into the project on the recommendation of electrical partner EW-Elektro Widmer AG and interior design firm 85d. Through close collaboration between the timber construction, interior design, electrical, and lighting design teams, the lighting and architecture were optimally coordinated.
