

EUROFINS ANALYTICO

New Ultra-Modern Laboratory in Amersfoort, Netherlands

Eurofins Analytico

New Ultra-Modern Laboratory in Amersfoort

With the new build of its facility along the A28 in Amersfoort, Eurofins Analytico has created an ultra-modern environment for precision soil and water analysis. Together with installation partner Van Dorp, TRILUX developed a tailored lighting concept that meets the stringent laboratory requirements for precision, visual comfort (UGR) and high illumination levels.

Address
Stockholmweg 60, 3825 Amersfoort, Netherlands

Architect
Van Dorp

Lightplanner
TRILUX

At the core of the installation is nearly 1,200 metres of the E-Line Pro continuous-row system, delivering high visual comfort (favourable UGR values) and 750 lux on worktops, while seamlessly integrating a centralised emergency lighting solution directly onto the trunking rail. In addition, robust E-Line luminaires (IP64) illuminate the automated sample warehouse, complemented by tailored downlights and spotlights in offices and communal spaces.
