AIRPORT CGN / BN

Germany

Airport CGN / BN

At the time of construction completion the P2 at Cologne/Bonn Airport was the largest car park in Europe, offering space for 10,300 vehicles. Upgrading of the lighting to LED technology was implemented around ten years after commissioning the building designed by Chicago architect Helmut Jahn.

Slender weather-proof luminaires with various optics ensure good visual conditions on parking lots, traffic routes and in the access spindles and also blend discreetly into the architecture.
