RHEINENERGIESTADI ON Germany

Rheinenergiestadion

The RheinEnergieSTADION is exemplary for a holistic solution provider. Many locations in the project were upgraded to cutting-edge LED luminaires ranging from the car park and stadium approach road to the stands, stairways, corridors and sanitary rooms.

Especially noticeable with regard to the external visual impact of the stadium is the new sublighting of the stands with red light and the staging of the four pylons powered by Insta . The towers can be embellished with graphic light patterns, fine colour chases and dynamic running light to a height of 72 metres. The various lighting systems for the stadium demonstrate how efficiency and good looks can go hand in hand – creating luminous landmarks and realising functional general lighting.

Address

Aachener Straße 999,
50933 Köln, Germany
