Netherlands

# LC Packaging

For their 95th anniversary, LC Packaging wanted to create a headquarters and distribution centre that moves with the times. Completed in 2020, the building immediately achieved the BREEAM Outstanding score.

To reach the highest sustainability level, all aspects of sustainable building were considered from the design stage onwards. CO<sub>2</sub> emissions, energy, and water usage were significantly reduced, and sustainable materials were used throughout both the interior and exterior.

The round steel staircase immediately draws attention, bathed in natural light from the glass dome above. The office provides a pleasant working environment with views of the green waterside through the glass walls. Wooden accents, greenery, and other natural elements create a warm atmosphere. A fitness room is available for employees, and daylight is maximized and complemented by high-quality, sustainable artificial lighting for optimal work comfort.

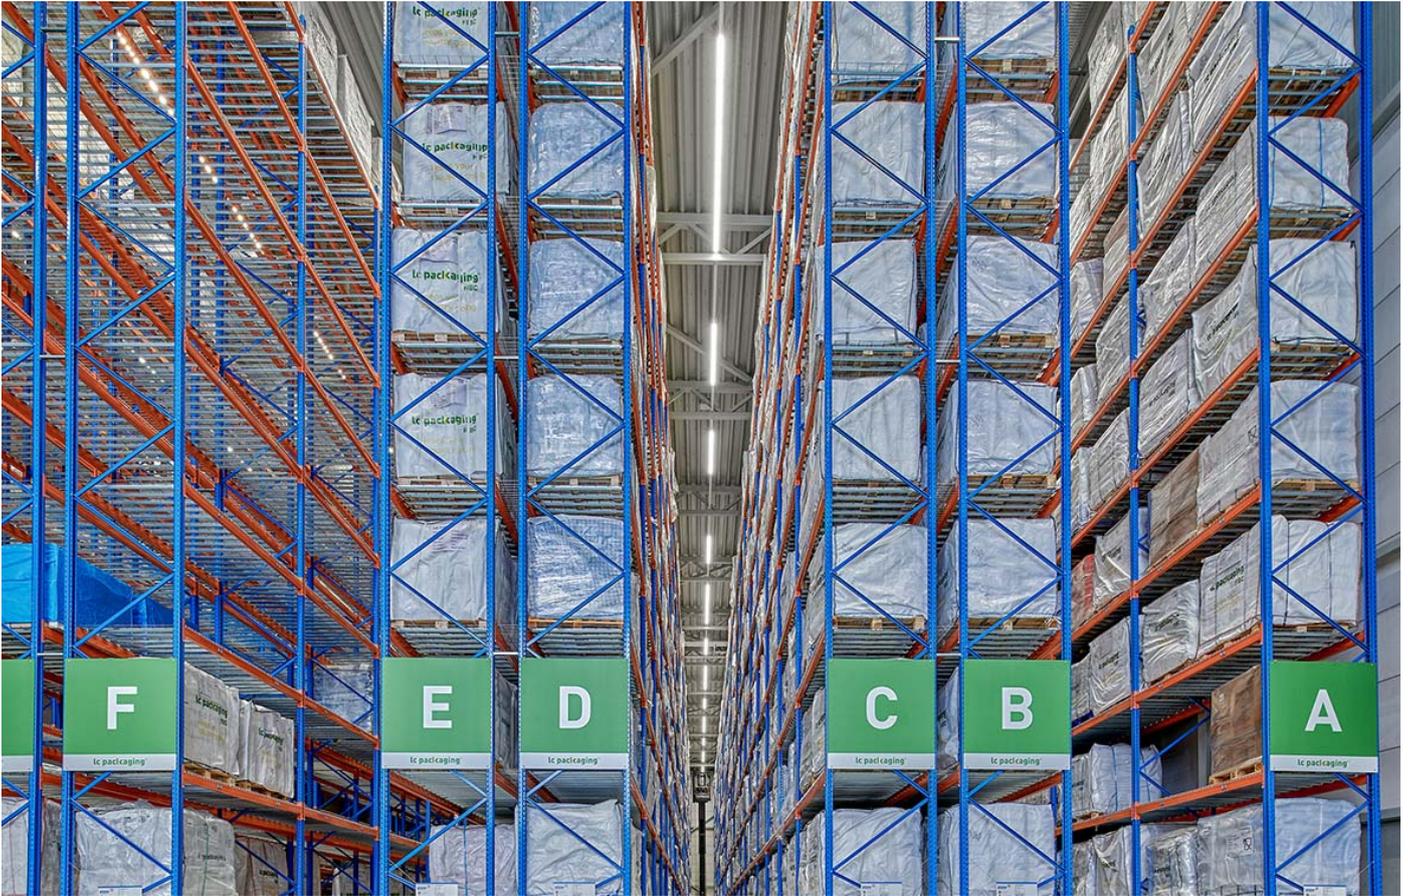

## Address

Otto Matseweg 9, 2742  
JW Waddinxveen,  
Netherlands

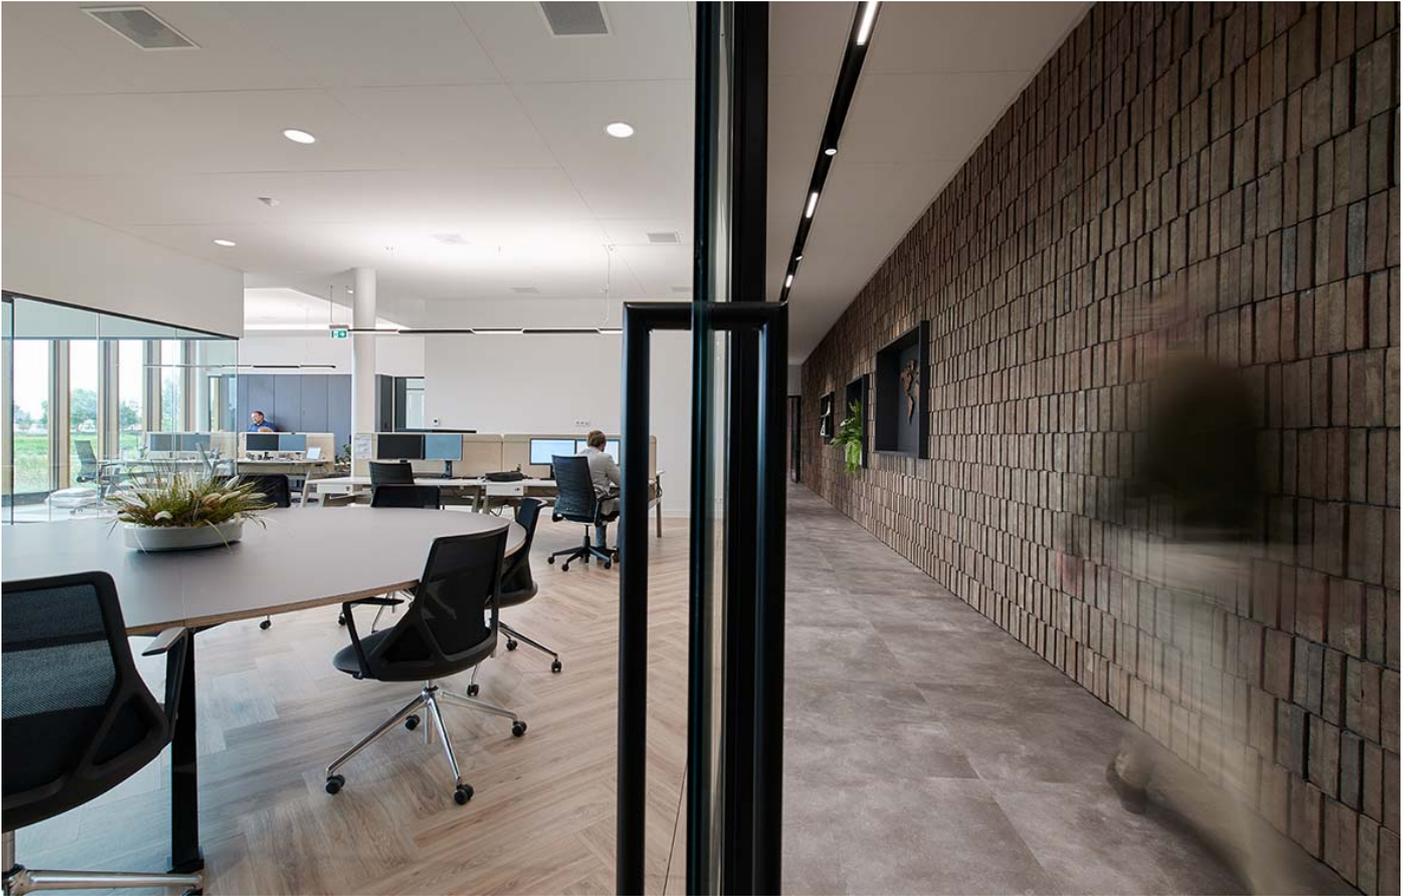

Indirect lighting at the workspaces is provided by pendant LED luminaires, creating a pleasant and spacious atmosphere. Elegant, long light strips provide general lighting, combined with LED spots for accent lighting. Cove lighting in the daylight domes enhances the effect of the staircase and the dome, completing the overall lighting design.
