SIMPLIFY YOUR LIGHT.

CANADIAN PARLIAMENT

Canada

Canadian Parliament

Prestigious buildings around the world require unique lighting solutions.

An excellent example: As part of a renovation, the Canadian Parliament in Ottawa (Canada) was looking for a technologically leading lighting solution for the conference and meeting rooms in the Westblock. The lighting had to meet the high technical requirements for TV transmissions from the conference rooms and it needed to blend harmoniously with the historical architecture.

In a closely coordinated process, TRILUX developed three special lighting solutions. The most striking feature with a high recognition value is a four-pointed, shining star, which embodies the central design element in the recessed and surface-mounted ceiling luminaires. In addition, a large number of special technological and design requirements were implemented in close cooperation with the customer. The special luminaires were produced in our factory in Germany.

Address

Wellington Street, K1A
Ottawa, Canada

Architect

ARCOP

Lightplanner

OVI New York
