ScenaticPoint 905 LED recessed spotlight ceiling cutout Ø 68/80 mm

"It is not enough when lighting in corridors, foyers, exhibition spaces and shops is simply ""standard-compliant and practical"" - the right light also sets appealing accents and creates a prestigious and inviting ambience. The new Scenatic Point 905 has been developed for this purpose. The LED spotlight with reflector technology even fits into tight intermediate ceiling spaces thanks to its compact construction. The luminaire is also able to illuminate almost any area in an attractive and targeted way due to flexible pan-and-tilt alignment in all directions. Available in differing construction sizes and with various luminous flux packages, the Scenatic Point 905 is highly adaptable and thanks to high energy efficiency levels and very simple installation, the spotlight is ideal for refurbishing lighting systems featuring standard low voltage luminaires."

Siella LED ceiling-recessed luminaire

Siella has already proven itself over seven product generations in office environments thanks to high energy efficiency, simple installation, pleasant light and low investment costs. Now the next technological advance is just around the corner. The eighth generation offers even more flexibility in use thanks to up to 4 multilumen and 2 multicolour settings. Thanks to two different optical systems, a microprismatic and a translucent optic, Siella allows lighting concepts for a wide variety of office areas (UGR22 or UGR19) to be implemented with just one product range. In combination with the consistently subsidy-eligible energy efficiency, this makes Siella G8 the standard solution for flexible office lighting.

Faciella

Highlighting objects, surfaces and buildings – with Faciella LED the path to perfect light was never as simple. Completely different lighting tasks can be solved with a uniform design. The high-performance and energy-efficient projector is available in several construction sizes and with various luminous flux packages and beam angles for flexible use. The manually adjustable inclination angle simplifies precise targeting of the projector.

Inperla Ligra Plus C05 LED downlight ceiling cutout Ø 140 mm

Refurbishing was never so simple as with the easy-mounting and flexible Ligra Plus LED. With the cladding covers, the luminaire fits into nearly all existing ceiling cutouts and if required can be connected via mains through-wiring from luminaire to luminaire to save time. The Ligra Plus LED is available with different luminous flux packages and beam characteristics for the optimal illumination of a wide variety of rooms. All versions fulfil maximum demands for visual comfort and energy efficiency. And thanks to the diverse design versions, the Ligra Plus LED always blends harmoniously into the interior design.
